Career Objective

Aspiring Data Scientist currently pursuing a PGDM in AI and Data Science, with a strong foundation in Python, SQL, machine learning, and emerging Generative AI concepts. Passionate about turning data into meaningful insights and building intelligent models that solve real world problems while continuously growing in AI and data science.

Internship Experience

Big Bang Innovations

May 2024 – Sept 2024

Summer Intern – Technical Support

Project/Key Tasks:

- Delivered end to end technical support by identifying, reporting, and resolving application issues, ensuring smooth system performance and improved user experience.
- Acted as a multi role team member, managing bug tracking, preparing issue reports, and coordinating with developers for efficient problem resolution.
- Contributed to lead generation efforts by identifying potential clients and supporting outreach activities alongside core technical responsibilities.

Academic Projects

Analyzing Daily Activity Patterns and Their Influence on Calorie Expenditure

Dec 2025

EDA and Machine Learning Study

- Processed and structured fitness tracker datasets by handling missing values, transforming variables, and creating relevant features for analysis.
- Conducted exploratory data analysis to uncover trends and relationships between physical activity metrics and calorie consumption.
- Developed and evaluated multiple machine learning algorithms to estimate total calories burned based on activity patterns.
- Determined the most influential factors contributing to calorie expenditure through model insights and data interpretation.

Plant Leaf Disease Detection and Severity Analysis

Dec 2025

Image Processing Project

- Developed an image processing pipeline to automate plant disease detection, reducing dependency on manual visual inspection and subjectivity in diagnosis.
- Performed diseased region segmentation on leaf images to accurately isolate infected areas from healthy portions.
- Calculated disease severity by estimating the percentage of infected area relative to the total leaf area.
- Utilized the Plant Village dataset and incorporated environmental parameters such as temperature and humidity to enrich analysis.
- Focused on improving objective disease assessment and supporting precision agriculture decision making.

Samriddhi Digital Empowerment Platform for Self Help Groups (SHGs)

Dec 2025

Enabled Social Innovation and Digital Transformation Project with AI

- Designed a comprehensive digital ecosystem to improve financial transparency, record keeping, and market access for women led Self Help Groups.
- Developed key modules including a voice enabled Smart Book ledger, AI chatbot assistant, SHG Health Score analytics engine, and a unified e commerce marketplace.
- Enabled data driven monitoring for CSR organizations through performance scoring and risk alerts to support better funding decisions.

- Focused on solving literacy barriers, record opacity, and limited product visibility through voice technology, automation, and digital infrastructure.
- Aimed at transforming SHGs into digitally empowered, credit ready enterprises while promoting financial inclusion and women entrepreneurship.

Airplanes Crash Trends and Operator Risk Analysis

Sept 2025

SQL Server and Data Analysis

- Prepared and refined aviation accident datasets by cleaning inconsistencies and organizing data for reliable analysis using Python.
- Connected SQL Server with Python to retrieve, query, and verify structured data for analytical tasks.
- Explored long term crash patterns, types of incidents, survival statistics, and operator related risk distributions through data analysis.
- Generated meaningful insights on aviation safety progression, high risk operators, and key factors affecting accident impact and severity.

Skills

Programming & Data Analysis

- Python
- SQL
- Microsoft Excel
- Machine Learning
- Retrieval-Augmented Generation
- Gen AI
- Exploratory Data Analysis (EDA)
- Matplotlib, Seaborn
- NumPy
- Pandas
- Scikit-learn

Soft Skills

- Communication
- Presentation
- Problem Solving
- Teamwork

Certification

- Python for Data Science
IBM
- SQL and Relational Databases 101
IBM

Education

Adani Institute of Digital Technology Management, Gujarat	2025 - Present
PGDM in Artificial Intelligence and Data Science	
GPA: 2.12/4.33	
Khyati School Of Computer Application, Ahmedabad	2022- 2025
Bachelors of Computer Application	
CGPA: 6.67/10.00	
ASDB Dadawala Junior College, Pune, Maharashtra	2020- 2022
12 th Board (HSC)	
Aggregate Percentage: 67	

Personal Details

Date of Birth
10th June 2003 Languages Known English, Hindi, Gujarati
